The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises:

Claim 8; SEQ ID NO 12354; 2537pp + Sequence Listing; English.

CDNAS.

```
complementary strand of a polyuncleotide which comprises one of the s602 mucleotide sequences defined in the specification, where the nucleotide comprises at least 15 mucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polyuncleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence; where the complementary to a polyuncleotide which comprises a 5'-end sequence complementary to a coligonucleotide which comprises a 1'-end sequence, where the combination of the 5'-end sequence) are aleast 15 mucleotides and the combination of the 5'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in specification. The primer sets can be used in antisense therapy and in specification. The primers for specification in the primers are useful for synthesising polynucleotides, care therapy. The primers also useful for the fetal-length cDNAs. The primers are also useful for the count and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs assily without any specialised methods. AAH03166 to AAH13628 and AAH33633 to AAH13642 represent human cDNA sequences; AAB92446 to AAB95893 colligonucleotides, all of which are used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            182
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ValThrTyrSerProGlyGlyTyrileAlaGlyIleGlnArgGlyIleMetSerGluArg 145

The invention relates to isolated polymucleotides which are differentially-regulated in breast cancer. The methods and compositions of the present invention are useful for detecting, diagnosing, staging, monitoring, prognosticating, preventing and/or treating diseases and conditions relating to breast cancer, and may be used in gene therapy or antisense therapy. They can also be used in research, drug discovery, clinical medicine and forensic medicine. Sequences given in records ACCT2012-ACCT2074 represent polymucleotides of the invention that are differentially-regulated in breast cancer. NOTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at

The methods and compositions of the present invention are useful for detecting, diagnosing, staging, monitoring, prognosticating, preventing and/or treating diseases and conditions relating to breast cancer, and may be used in gene therapy or conditions relating to breast cancer, and may be used in gene therapy or clinical medicine and forensic medicine. Sequences given in records differentially-regulated in breast cancer. NOTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at

ĸ Majumder Herrmann JL, Shimkets RA, Herrman Mezes PS, Rastelli L; Vernet CAM, Fernandes E, Macdougall J, Mishra V, 2001-596837/67. P-PSDB; AAU08681 Novel polypeptides designated as FCTRX polypeptides, useful in detection, prevention and treatment of a broad range of pathological states.

Claim 9; Page 37-39; 215pp; English

The invention relates to human FCTRX polypeptides, FCTR1-FCTR7, and the nucleic acids encoding them. These sequences are useful for the treatment or prevention of numerous disorders including myelogenous leukaemia, carcinomas, melanomas, gliomas, astrocytomas, congenital meonatal carcinomas, melanomas, gliomas, astrocytomas, congenital meonatal carcinomas, melanomas, gliomas, astrocytomas, congenital meonatal calcinomas, familial myelodysplastic syndrome, familial myelodysplastic syndrome, mental mealth conditions, immunological calsorders, allorgy and infection, bronchial asthma, Avellino type castinophilia, lung diseases, reproductive disorders, infertility, male cosinophilia, lung diseases, reproductive disorders, infertility, male cosinophilia, lung diseases such as diabetes, Schistosoma mansoni chection Spinocerebellar ataxia, plasmodium falciparum parasitaemia, corneal dystrophy-dattice type I and Reis-Bucklers corneal dystrophy. This sequence represents DNA encoding the FCTR3a homologue FCTR3f

The invention relates to FCTRX polypeptides and the polynucleotides encoding them. The sequences of the invention are useful for the encoding them. The sequences of the invention are useful for the encoding them. The sequences of the invention are useful for the encoding that the FCTRX polypeptide, such as colorectal cancer, associated with the FCTRX polypeptide, such as colorectal cancer, adenomatous polyposis coli, malignant varian tumours, malignant brain tumours, mammary tumours, human gliomas, astrocytomas, renal cell carcinoma, neasts adenocarcinoma, ovarian carcinoma, melanomas, clear carcinoma, pracest adenocarcinoma, ovarian carcinoma, melanomas, clear carcinoma, praces, neurological disorders, neurological disorders, curroct-Marie-Tooth neuropathy, Gardner syndrome, mental health conditions, immunological disorders, allergy and infection, asthma, lung conditions, immunological disorders, allergy and infection, asthma, lung ceficiency, deemoid tumour, turcot syndrome, liver cirrhosis, hepatitis conditions, spinocerebellar ataxia, plasmodium falciparum infection, crepresents cDNA encoding an FCTRX polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           5540

Novel polypeptides designated as FCTRX polypeptides, useful in detection, prevention and treatment of a broad range of pathological states.

Claim 9; Page 33-35; 215pp; English.

The invention relates to human FCTRX polypeptides, FCTR1-FCTR7, and the nucleic acids encoding them. These sequences are useful for the treatment or nucleic acids encoding them. These sequences are useful for the treatment or prevention of numerous disorders including myelogenous leukaemia, carcinomas, melanomas, astrocytomas, congenital neonatal allowas encourable alloimmume thrombocytopaenia, neurological disorders, neurodegenerative disorders, nerve trauma, familial myelodysplastic syndrome, Charcot-Marie Tooth neuropathy, demyelinating Gardner syndrome, familial corders, allergy and infection, bronchial asthma, Avellino type disorders, allergy and infection, bronchial asthma, Avellino type of soinophilia, lung diseases, reproductive disorders, infertility, male cosinophilia, lung diseases, reproductive disorders, infertility, male disorders, pancreatic disorders, deafness, glycoprotein la deficiency, desmoid disease, turcot syndrome, liver cirrhosis, hepatitis C, gastric disorders, pancreatic diseases such as diabetes, Schistosoma mansoni conference spincerebellar ataxia, plasmodium falciparum parasitaemia, corneal dystrophy-Greconow type I, Corneal dystrophy-lattice type I and correlation-like protein

for preventing

New FCTRX polypeptide and encoding polynucleotide, useful for prevor treating FCTRX-related disorders, such as cancer, autoimmune, neurodegenerative, gastrointestinal, reproductive and inflammatory

The invention relates to FCTRX polypeptides and the polynucleotides encoding them. The sequences of the invention are useful for the manufacture of a medicament for diagnosing and treating disorders associated with the FCTRX polypeptide, such as colorectal cancer,

APPLICANT: Alsobrow: II, John et al.

TITLE OF INVENTION: THERAPEUTIC POLYPEPTIDES, NUCLEIC ACIDS ENCODING SAME, AND METHODS:
FILE REFERENCE: 21402-568A

CURRENT APPLICATION NUMBER: 105/10/383,201

PRIOR PLICATION NUMBER: 107029020

PRIOR FILING DATE: 2001-12-19

PRIOR FILING DATE: 2001-12-19

PRIOR PLICATION NUMBER: 60/365,984

PRIOR FILING DATE: 2002-04-12

PRIOR PLING DATE: 2002-04-12

PRIOR PLING DATE: 2002-06-14

PRIOR PLING DATE: 2002-06-14

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Description
